

VIMUKTHI LAKSHAN SENANAYAKA

Colombo, Sri Lanka | +94 77 398 3323 | vimukthil95@gmail.com | [LinkedIn](#) | [Portfolio](#) | [GitHub](#)

Dynamic and analytical professional with a M.Sc. in Business Analytics and a strong technical background in programming, database management, and data-driven optimization. Proven record of accomplishment of transforming complex operational datasets into actionable business insights, eliciting business requirements, and collaborating with cross-functional teams to improve software product performance and marketplace efficiency.

CORE COMPETENCIES

- **Business & Systems Analysis:** Requirement Elicitation, Data Cleaning, System Integration Testing (SIT), Process Mapping, Trend Analysis, Data Modeling.
- **Data Analytics & Visualization:** SQL, Power BI, Looker Studio, Advanced Excel (Pivot Tables, Data Modeling), Machine-learning models.
- **Programming & Machine Learning:** Python (Pandas, NumPy, Scikit-learn), Java, JavaScript, PHP, HTML, CSS.

PROFESSIONAL EXPERIENCE

Product Analyst | *PICKME Food (Digital Mobility Solution Lanka PVT LTD)* | May 2025 – May 2026

- Collaborated closely with product engineering and business operations teams to translate complex operational needs into clear product optimizations.
- Developed and maintained real-time Looker Studio and Power BI dashboards to track supply-demand performance across food and marketplace platforms.
- Analyzed large operational datasets using SQL and Python to identify supply gaps, optimize delivery routes, and improve overall order fulfillment efficiency.

Executive Inventory | *Teknowledge Shared Services Pvt Ltd* | Oct 2023 – Feb 2025

- Formulated data-driven system requirements to automate reporting processes using Excel Pivot Tables and data modeling techniques.
- Built and managed comprehensive Power BI dashboards providing real-time production and logistics insights to USA-based corporate management.
- Analyzed shipment, procurement, and stock movement data to identify pipeline bottlenecks and improve planning accuracy.
- Developed Machine learning demand forecasting models to project future inventory requirements, translating high-level trends into granular, item-wise allocation updates to optimize sourcing strategies and prevent stock imbalances.

Procurement Merchandiser (1-Year Contract) | Brandix Fast Fashion, Welisara | Jun 2022 – Sep 2023

- Managed the end-to-end raw material in-housing pipeline by extracting and analyzing core system data to align supplier delivery schedules with strict production timelines.
- Analyzed historical stock movement trends, safety thresholds, and material allocation metrics to optimize purchasing efficiency and eliminate inventory over-ordering.
- Facilitated weekly supplier alignment meetings to gather real-time capacity and lead-time updates, cross-referencing vendor inputs against internal requirements to proactively resolve material and quality discrepancies.
- Built and maintained data records to track supplier delivery delays and quality issues; performed root-cause analysis on supply chain bottlenecks to engineer proactive action plans that minimized production disruptions.

EDUCATION

- **Master of Science in Business Analytics** | University of Colombo School of Computing (2023 – 2025)
- **Bachelor of Science (Computer Science, Physics, Mathematics)** | University of Ruhuna, Matara (2017 – 2020)
- **Diploma in ICT** | Esoft Metro Campus, Kiribathgoda (2015 – 2016)

ACADEMIC RESEARCH & PROJECTS

- M.Sc. Research Thesis | University of Colombo School of Computing
 - *Mitigating Risk of Bank Loans using Machine Learning for Loan Approval and Loan Amount Prediction.*
 - Developed and trained predictive machine learning models using Python (Scikit-learn) to analyze historical applicant data, evaluate risk metrics, and optimize automated loan approval workflows.
- Online Shopping & Inventory Management System | B.Sc. Project
 - Develop online shopping and inventory management system as a final project of my first degree using HTML / CSS / PHP / Bootstrap / MYSQL / Java Script. This system manages database of books and user profiles by add / delete / and edit data.
- Portable Fingerprint Scanner | Hardware & Software Integration Project
 - Developed and trained predictive machine learning models using Python (Scikit-learn) to analyze historical applicant data, evaluate risk metrics, and optimize automated loan approval workflows.
